

STEP-BY-STEP PACKING INSTRUCTIONS

1. FLAKE SAIL

Remove battens and other loose items and flake your sail, preferably stacking in the leech end.

2. ROLL AND TIE

Roll up the flaked sail from the leech end as tightly as possible and tie it with the sail tie that you received in the shipping kit.

3. PUT THE SAIL IN THE SAIL BAG

This will avoid the sail being exposed in the event the plastic wrapper chafes during shipment.

4. PUT SAIL IN THE BLUE PLASTIC

Put the sail in one end, so you have excess plastic on both sides.

5. TAPE

Fold in the ends and tape securely making sure the wrapper is as tight and compressed as possible. You want to eliminate any loose part of the wrapper by taping the corners and creases.

3. PLACE THE SHIPPING LABEL

Attach the provided shipping label on the large front surface, so that it is easy to spot and read. You are ready to send...
